The Axcelerator FPGA family is a single-chip, nonvolatile solution offering high performance and unprecedented design security at densities of up to 2 million equivalent system gates. Utilizing the AX architecture, Axcelerator devices have several system-level features, such as embedded SRAM (with embedded FIFO control logic), PLLs, segmentable clocks, chip-wide highway routing and carry logic. The solution is based upon 0.15 μm , seven-layers-of-metal CMOS antifuse process technology and 350 MHz system performance.

- 500+ MHz internal performance
- 500+ MHz embedded FIFOs
- PLL output up to 1 GHz and 8 PLLs per device
- 1.5 V, 1.8 V, 2.5 V, and 3.3 V mixed-voltage operation
- Bank-selectable I/Os—8 banks per chip
- 4.5 kbits variable-aspect RAM blocks with built-in FIFO control

Axcelerator Devices

Axcelerator Devices	AX125	AX250	AX500	AX1000	AX2000

The eX family of FPGAs, with its focused combination of features, can meet all of your power, speed, package and price requirements. eX devices are optimized for wired and mobile e-appliances, and enable designers to use a flexible single-chip FPGA for their traditional low-density ASIC requirements without the long lead times and costly NRE charges.

- Low power consumption
- Live at power-up
- 2.5 V, 3.3 V, and 5.0 V mixed-voltage operation with 5.0 V input tolerance and 5.0 V drive strength
- Up to 100% resource utilization with 100% pin locking
- Fuselock secure programming technology prevents reverse engineering and design theft
- Available in automotive temperature grades

eX Devices

eX Devices	eX64	eX128	eX256

The SX-A family of FPGAs offers a cost-effective, single-chip solution for low-power, high-performance designs. SX-A devices can be used to generate system-wide savings by integrating multiple functions into a single-chip solution. Providing a combination of performance, security and low power, SX-A FPGAs decrease the premium for performance while providing a solution that is highly resistant to reverse engineering.

- 250 MHz system performance
- 350 MHz internal performance
- Power-up and power-down friendly (no sequencing required for supply voltages)
- 66 MHz, 64-bit 3.3 V / 5.0 V PCI performance (supporting target, master and master/target)
- 2.5 V, 3.3 V, and 5.0 V mixed-voltage support
- 100% resource utilization with 100% pin locking

Featuring very low power consumption and the industry's highest design security, MX FPGAs offer designers a reliable, single-chip ASIC alternative. MX devices provide high performance while shortening the system design and development cycle. Offering an efficient, flexible 5.0 V architecture, MX is an ideal high-volume platform for integrating your legacy PLDs into a single device. Example applications include high-speed controllers and address decoding, peripheral bus interfaces, DSP and coprocessor functions.

- Single-chip ASIC alternative
- High performance mixed-voltage solution
- Contains embedded dual-port SRAM modules
- Ceramic devices available to DSCC SM
- Fast wide-decode circuitry
- QML certification

Microsemi Corporation (Nasdaq: MSCC) offers a comprehensive portfolio of semiconductor and system solutions for communications, defense & security, aerospace and industrial markets. Products include high-performance, radiation-hardened and highly reliable analog mixed-signal integrated circuits, FPGAs, SoCs and ASICs; power management products; timing and voice processing devices; RF solutions; discrete components; security technologies and scalable anti-tamper products; Power-over-Ethernet ICs and midspans; as well as custom design capabilities and services. Microsemi is headquartered in Aliso Viejo, Calif., and has approximately 3,000 employees globally. Learn more at www.microsemi.com.
